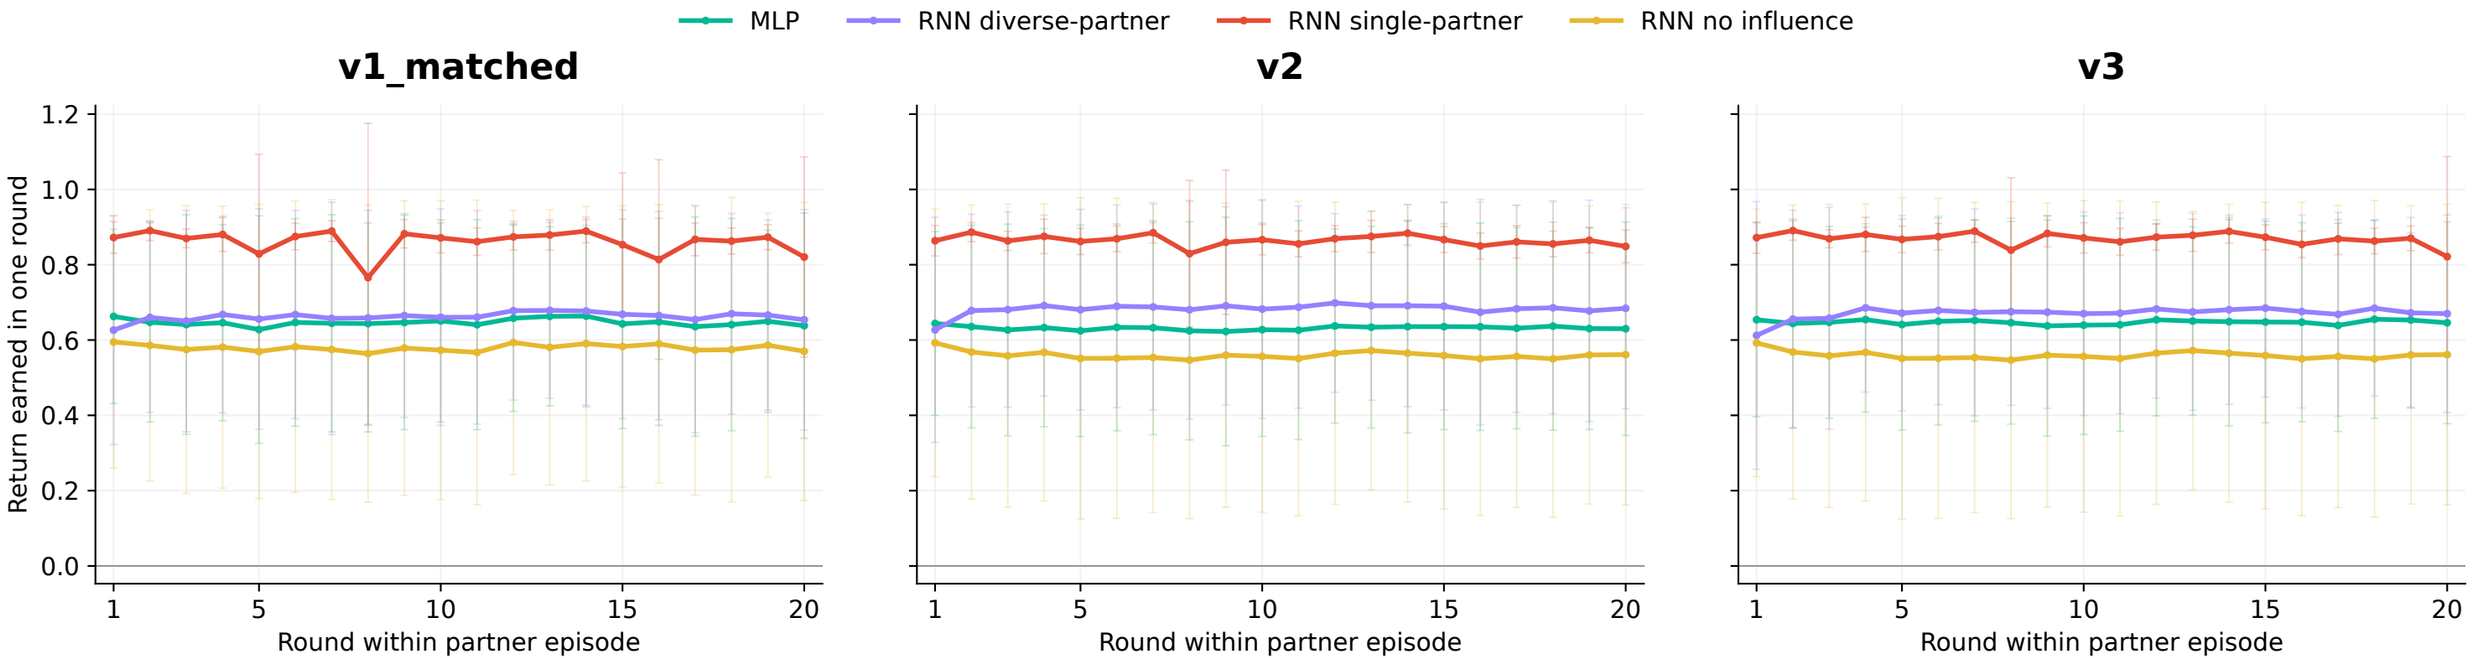
Return earned per round · Each condition's training partner profiles

Single-partner RNN: (1,4), 100 episodes. Other models: 24 profiles, 2,400 episodes each per protocol.



Means weight episodes equally across five learner seeds. Error bars: ±1 pooled episode sample SD, including differences between seeds.
Saved post-training evaluations; each episode has 20 rounds. Round returns include initialization ticks, waiting, successful terminal rewards, and timeouts.
