Assignment behavior: training seed 5

MLP · RNN · RNN single-partner · RNN no influence

v1_matched

v2

v3

Initial ego-red assignment (%)

Final ego-red assignment (%)

Mean switches per round

Assignments fixed within each round

Final partner on faster task (%)

Round within partner episode

Red assignment = ego red / partner blue. V2 initial assignments are random; V3 initial assignments are learned when influence is enabled.
No-influence curves show realized assignments, not voluntary choices. Faster-task matching is descriptive, not a full optimality score.
