RNN · s3 — RNN no influence · s5

Final ego-red assignment (%)

Final ego-blue assignment (%)

Partner on faster task (%)

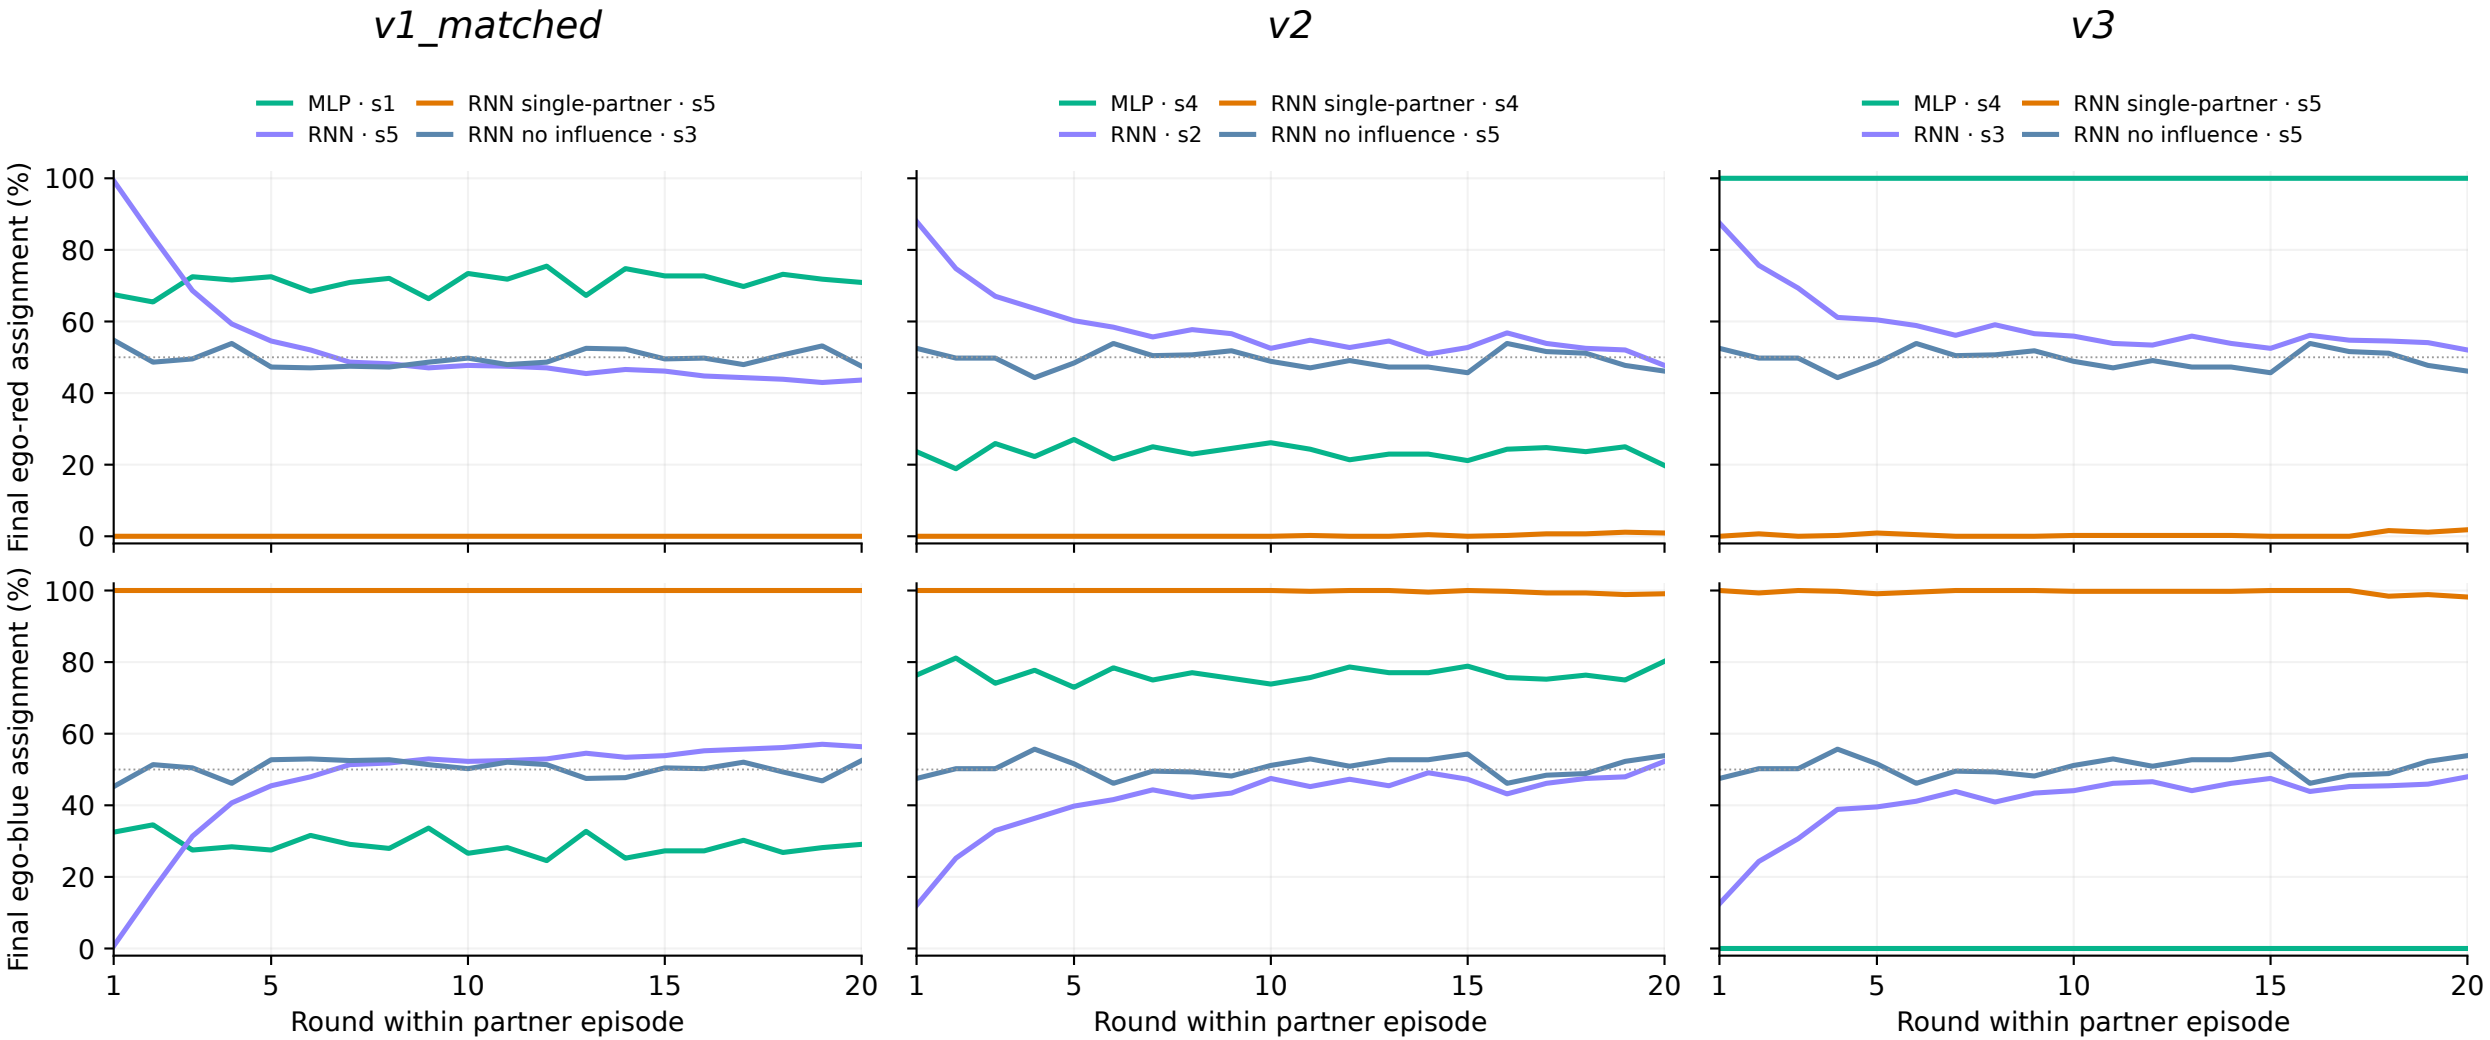

Mean switches / round

Assignments fixed within each round

Round within partner episode

Same policy selections as the best-of-five held-out return figure; selected by final logged training return.
Red = ego red / partner blue; blue = ego blue / partner red. Final assignments average 440 episodes at each round. No-influence assignments are imposed by the environment.

# Final red and blue assignments of the selected training seeds

Same policy selections as the best-of-five held-out return figure; selected by final logged training return.
Red = ego red / partner blue; blue = ego blue / partner red. Final assignments average 440 episodes at each round. No-influence assignments are imposed by the environment.

# Final assignment across the partner episode — selected training seeds

*v1_matched* | *v2* | *v3*

MLP — Final ego-red assignment (%) — Seed 1 | Seed 4 | Seed 4

RNN — Final ego-red assignment (%) — Seed 5 | Seed 2 | Seed 3

RNN single-partner — Final ego-red assignment (%) — Seed 5 | Seed 4 | Seed 5

RNN no influence — Final ego-red assignment (%) — Seed 3 | Seed 5 | Seed 5

Round within partner episode

One policy per experiment and condition, selected by final logged training return among seeds 1–5.
Each curve averages 440 held-out episodes. Seed choices match the best-of-five return figure.

# Final blue assignment across the partner episode — selected training seeds

*v1_matched* | *v2* | *v3*

MLP — Final ego-blue assignment (%)
Seed 1 | Seed 4 | Seed 4

RNN — Final ego-blue assignment (%)
Seed 5 | Seed 2 | Seed 3

RNN single-partner — Final ego-blue assignment (%)
Seed 5 | Seed 4 | Seed 5

RNN no influence — Final ego-blue assignment (%)
Seed 3 | Seed 5 | Seed 5

Round within partner episode

One policy per experiment and condition, selected by final logged training return among seeds 1–5.
Each curve averages 440 held-out episodes. Seed choices match the best-of-five return figure.

# Final assignment matches partner's faster task — selected training seeds

*v1_matched* | *v2* | *v3*

MLP — Seed 1 | Seed 4 | Seed 4

RNN — Seed 5 | Seed 2 | Seed 3

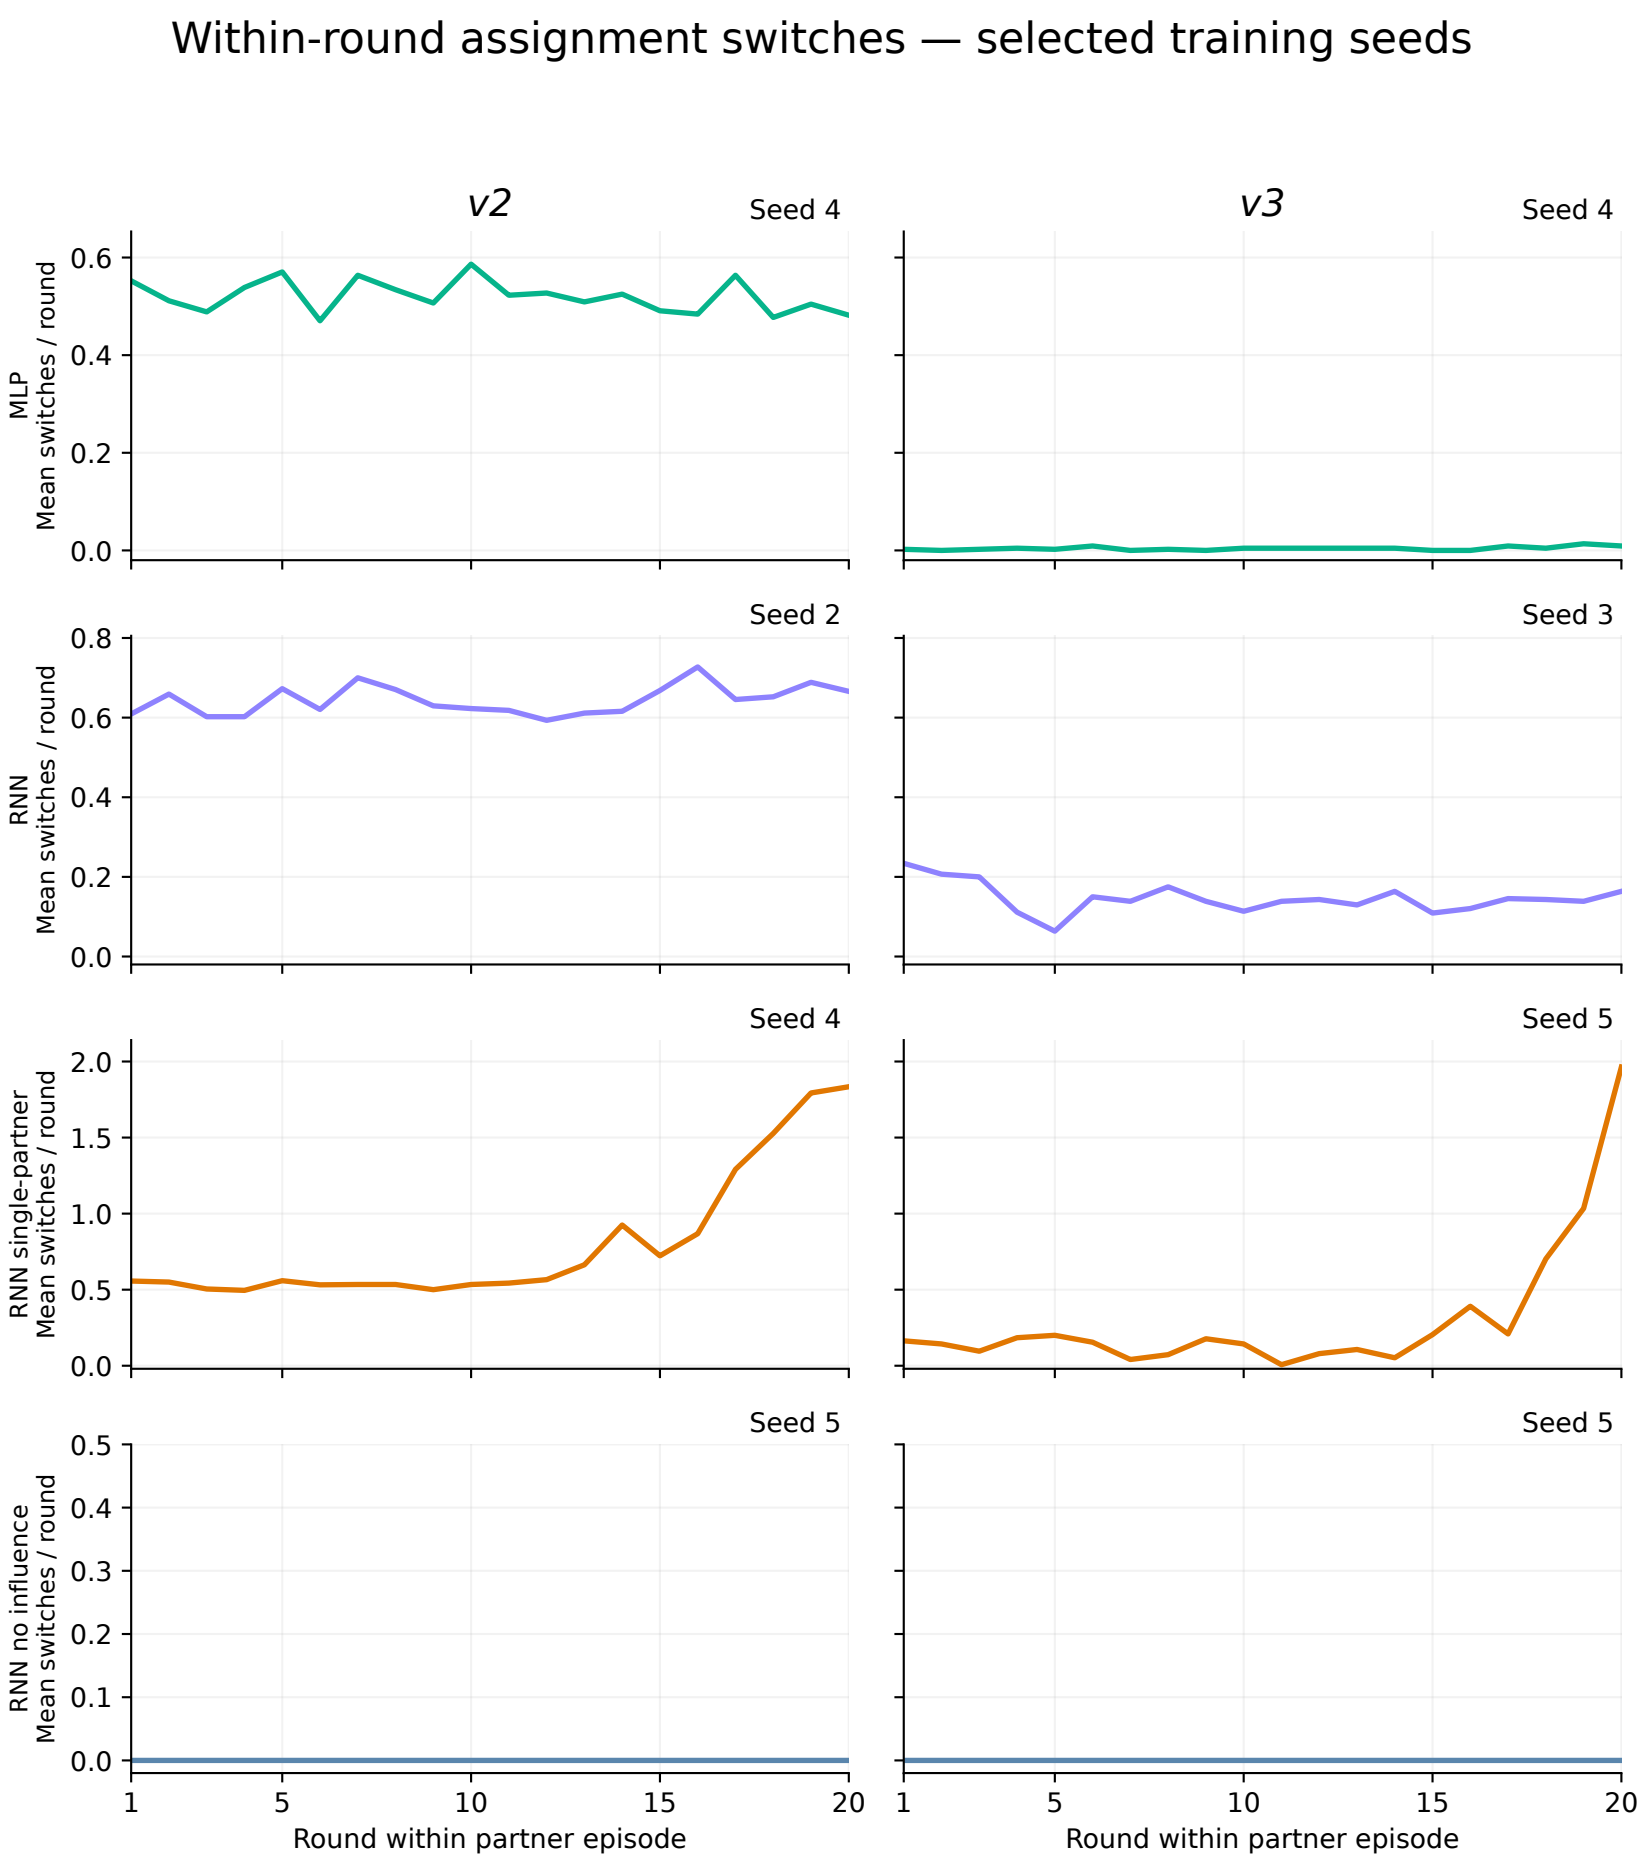

RNN single-partner — Seed 5 | Seed 4 | Seed 5

RNN no influence — Seed 3 | Seed 5 | Seed 5

Partner on faster task (%)

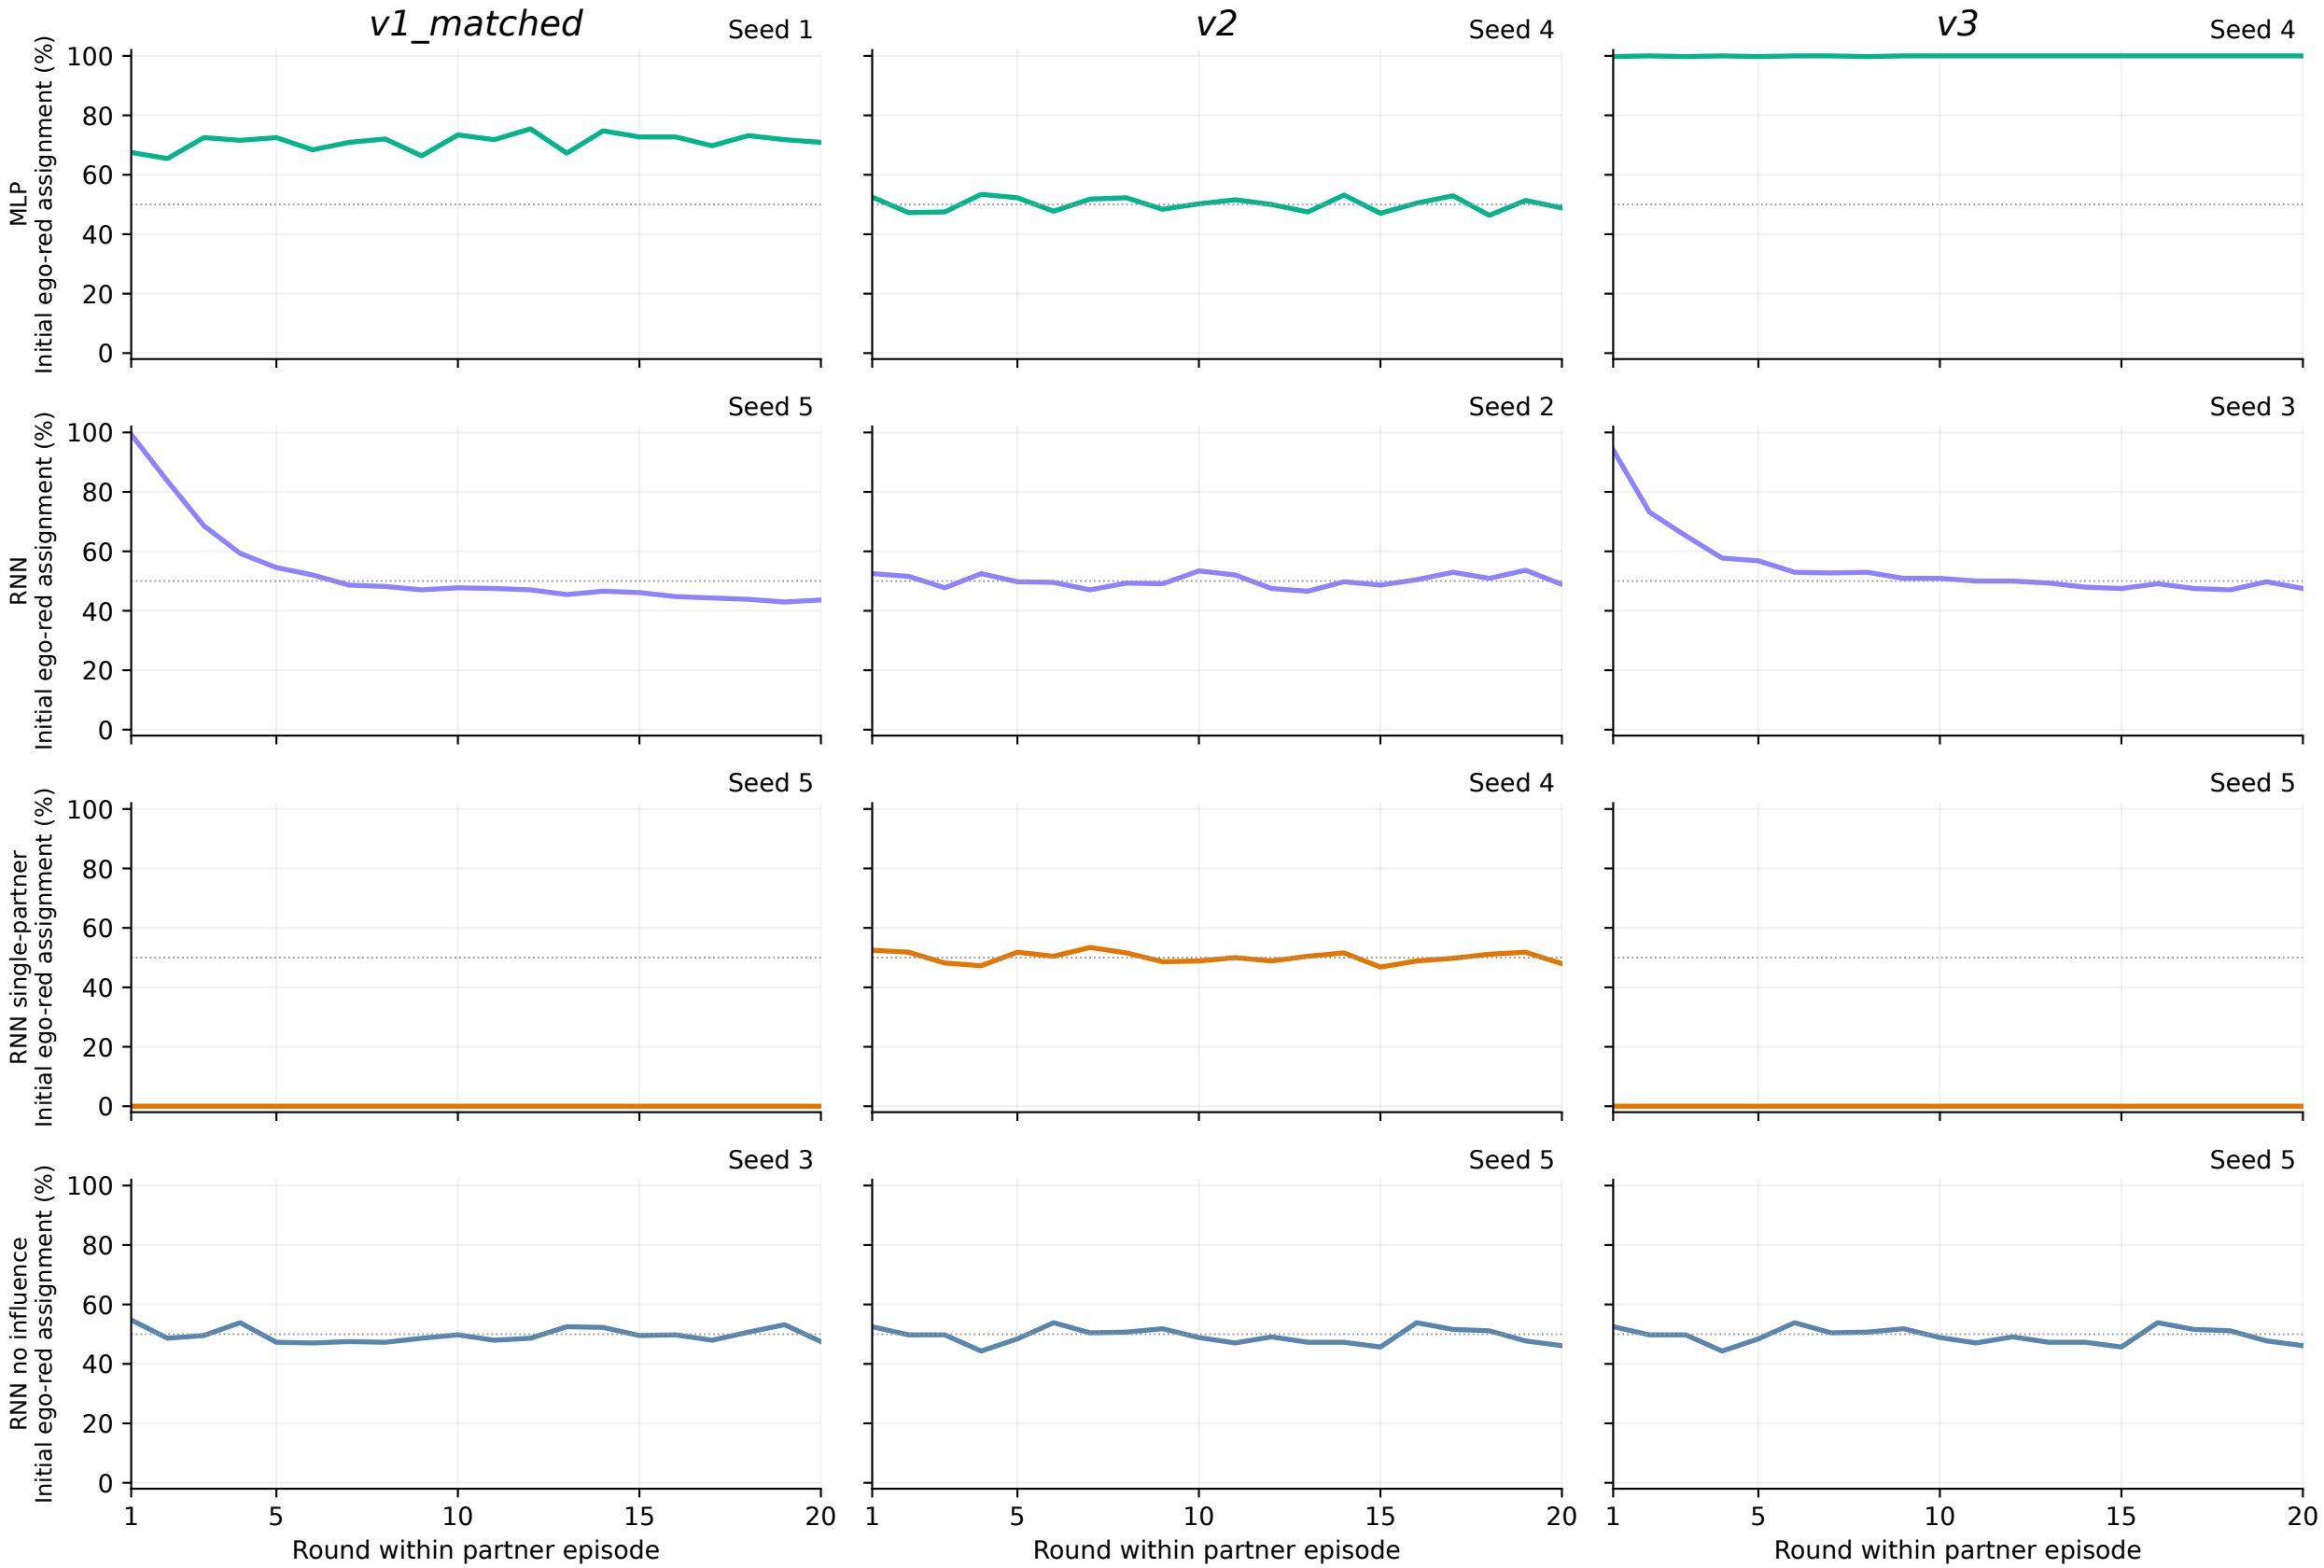

Round within partner episode

One policy per experiment and condition, selected by final logged training return among seeds 1–5.
Each curve averages 440 held-out episodes. Seed choices match the best-of-five return figure.

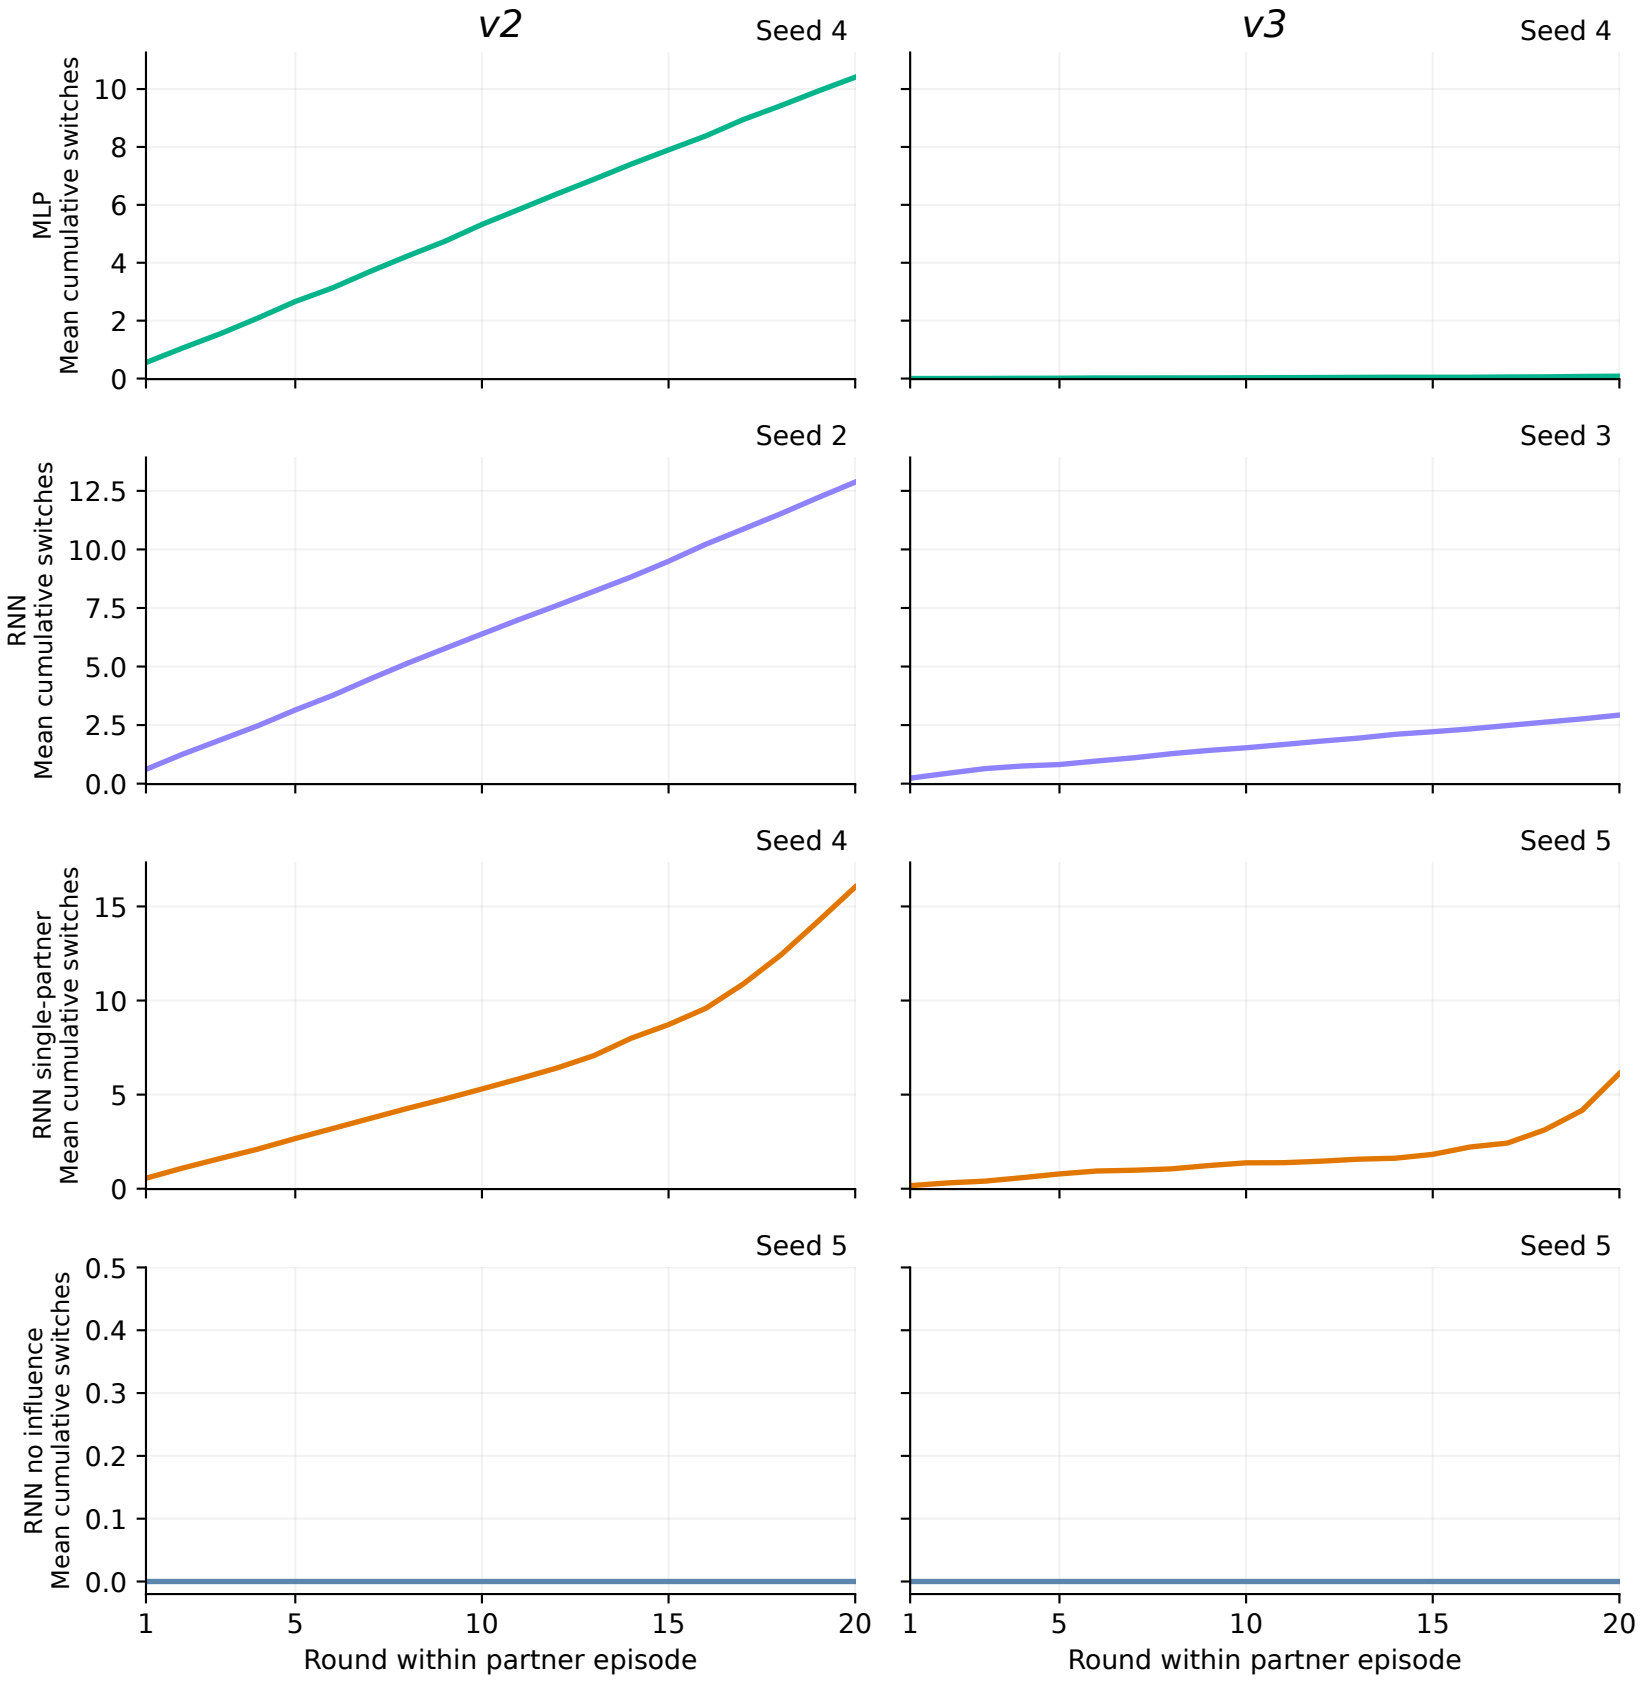

One policy per experiment and condition, selected by final logged training return among seeds 1–5.
Each curve averages 440 held-out episodes. Seed choices match the best-of-five return figure.

# Initial assignment across the partner episode — selected training seeds

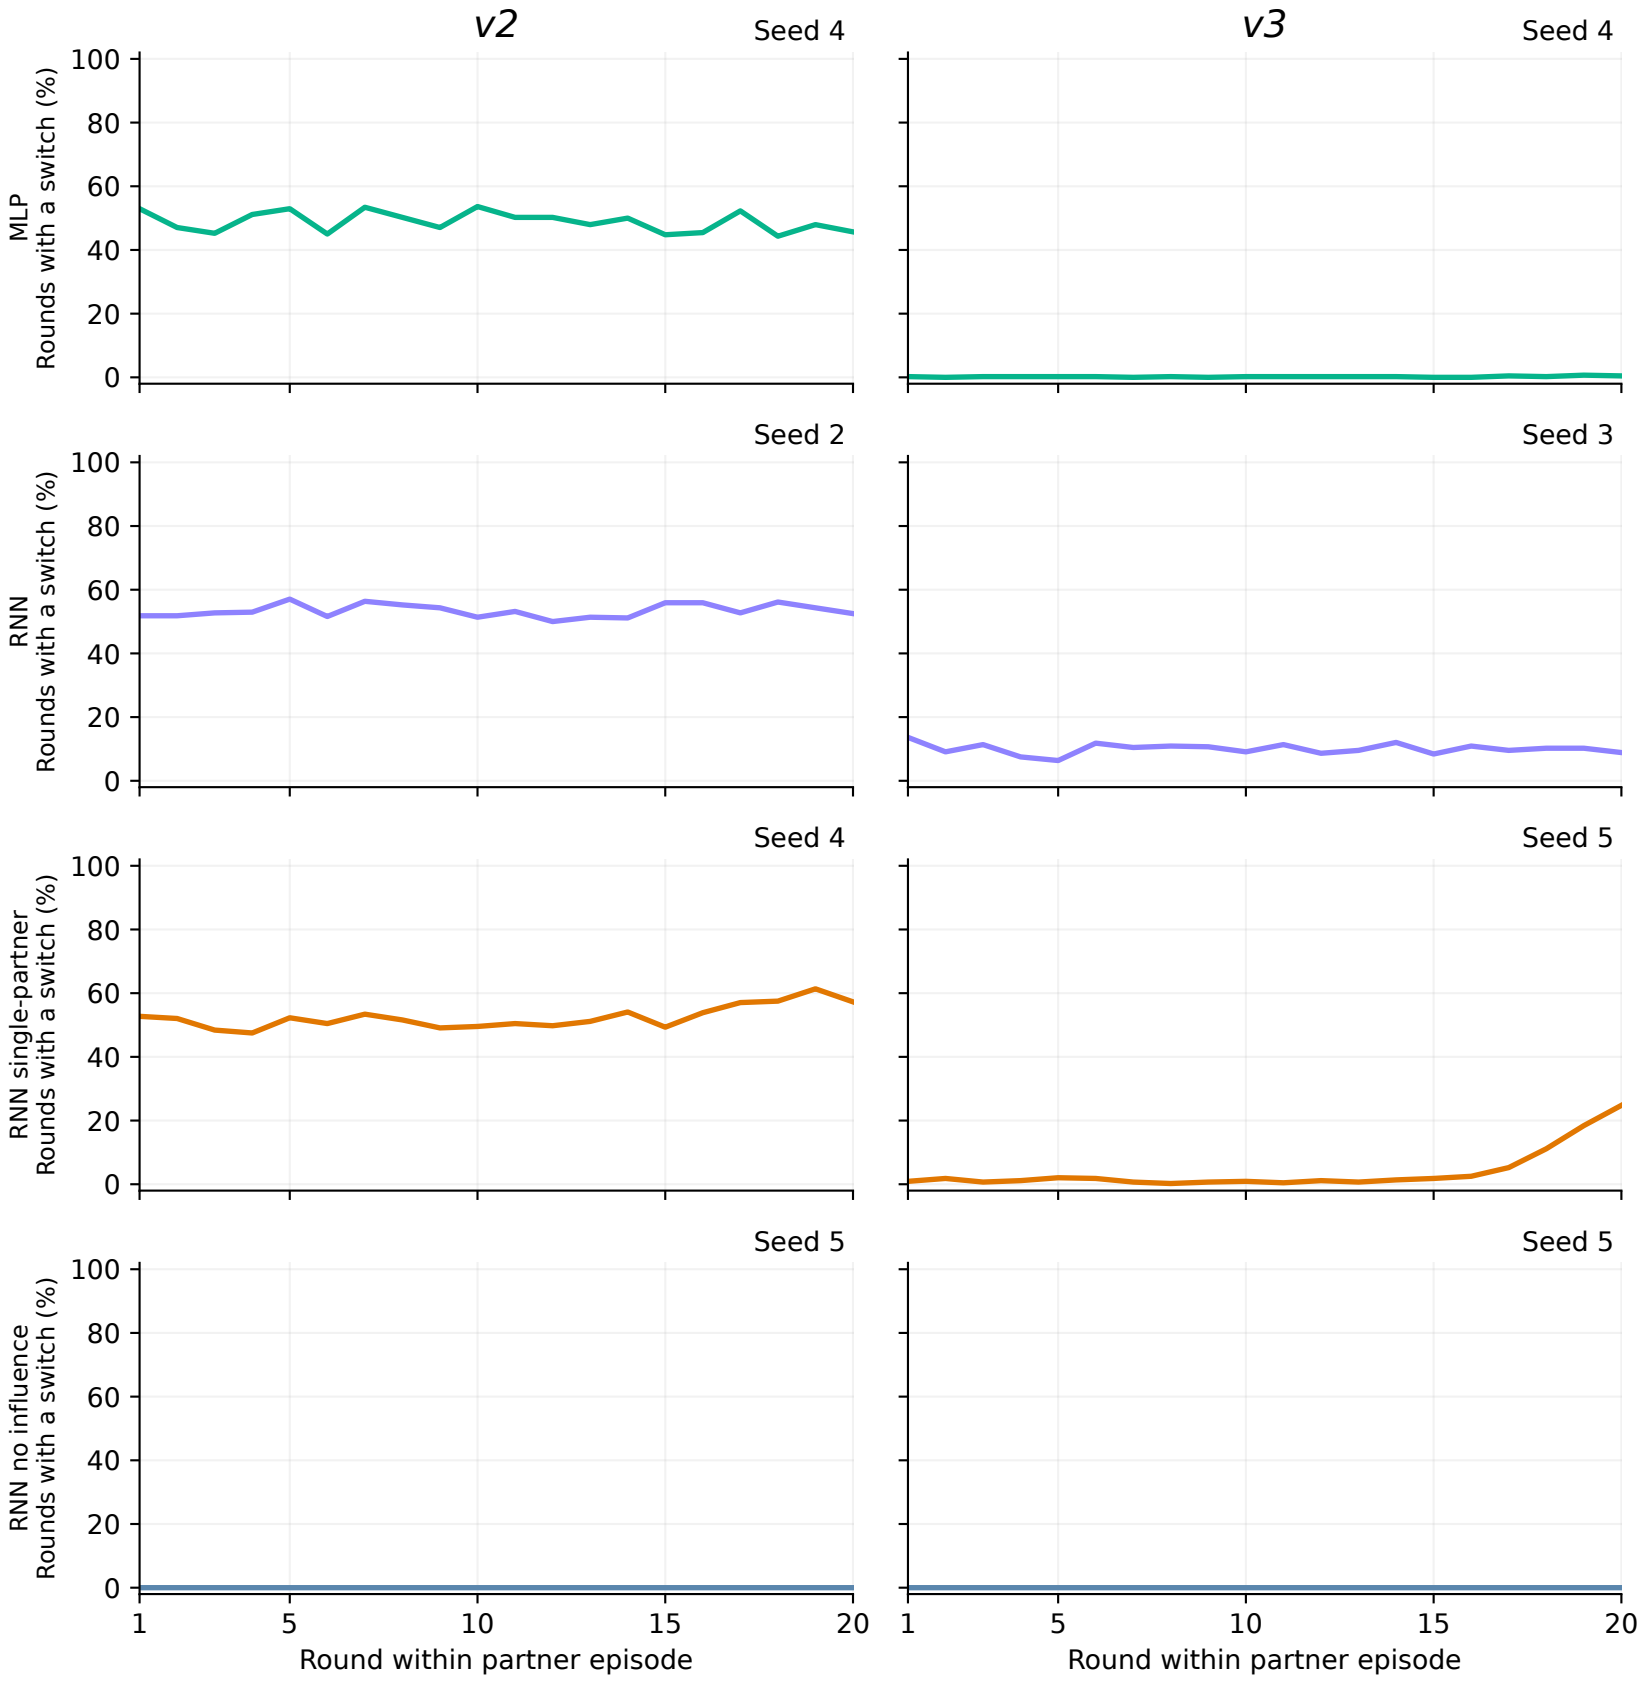

One policy per experiment and condition, selected by final logged training return among seeds 1–5.
Each curve averages 440 held-out episodes. Seed choices match the best-of-five return figure.

# Assignment switches accumulated over the episode — selected training seeds

One policy per experiment and condition, selected by final logged training return among seeds 1–5.
Each curve averages 440 held-out episodes. Seed choices match the best-of-five return figure.

# Rounds with at least one assignment switch — selected training seeds

One policy per experiment and condition, selected by final logged training return among seeds 1–5.
Each curve averages 440 held-out episodes. Seed choices match the best-of-five return figure.

# Final assignments by partner ability — selected training seeds

Partner faster at red (ego-red target: 0%)  Partner faster at blue (ego-red target: 100%)

*v1_matched* | *v2* | *v3*

MLP — Final ego-red assignment (%)

Seed 1 | Seed 4 | Seed 4

RNN — Final ego-red assignment (%)

Seed 5 | Seed 2 | Seed 3

RNN single-partner — Final ego-red assignment (%)

Seed 5 | Seed 4 | Seed 5

RNN no influence — Final ego-red assignment (%)

Seed 3 | Seed 5 | Seed 5

Round within partner episode

Partner color is complementary to ego assignment. Faster-task matching is descriptive; it does not account for geometry or switching costs.
